Bitcoin.com

I N T E G R A T I O N

Last year, we proudly announced our strategic partnership with Bitcoin.com. Today, we're thrilled to share that the long-awaited integration of our native

cryptocurrency, **\$ZANO**, is finally live in the Bitcoin.com Wallet! This marks a major milestone for the Zano ecosystem, making it easier than ever for users to store, send, and receive Zano seamlessly.

About Bitcoin.com

Since its launch in 2015, [Bitcoin.com](https://www.bitcoin.com) has become a global leader in introducing millions of people to cryptocurrency. **With over 55 million registered self-custody wallets** and **1 million active monthly users**, it stands as one of the most widely used crypto platforms. Bitcoin.com's firm commitment to privacy and security makes it a perfect partner for Zano, as both projects share the same core values of financial sovereignty and user empowerment.

The Zano Integration

In a groundbreaking move, Zano's blockchain is now fully integrated into the [Bitcoin.com wallet app](#), joining other major blockchains such as Bitcoin, Ethereum, Bitcoin Cash, Avalanche, and Polygon. With a user base exceeding 55 million registered self-custody wallets and over 1 million monthly users, this integration signifies a massive milestone in Zano's adoption journey.

Users can now seamlessly hold, send, and receive Zano directly within the Bitcoin.com wallet interface.

Zano Joins the Bitcoin.com Wallet: Private Crypto Just Got Easier

Key Features of Bitcoin.com Wallet

- **Private & Secure:** As a non-custodial wallet, users have complete control over their private keys.

- **Intuitive Interface:** Easy for both beginners and experienced users.
- **Multi-Currency Support:** Now includes **Zano** alongside Bitcoin, Ethereum, Bitcoin Cash, Polygon, and Avalanche blockchains.
- **Built-in Exchange:** Swap between cryptocurrencies with ease.
- **Buying Directly With Creditcard:** Direct fiat-to-crypto purchases.
- **Spend Crypto Anywhere:** Use the Bitcoin.com V-Card to make payments wherever Mastercard® is accepted.
- **Crypto News Hub:** Bitcoin.com owns one of the most popular crypto news platforms today.
- **Built-in Browser Support:** Interact with decentralized applications (dApps). Future updates may enable access to Zano dApps via the Zano Companion Browser Extension.
- **Available on Mobile:** Available on iOS and Android for easy access on the go.

Future Plans

Bitcoin.com has announced they're fully committed to expanding the Zano ecosystem. Roger Ver, founder of Bitcoin.com, has recently shared his excitement about the partnership between Confidential Layer and Zano, the world's first decentralized and permissionless bridge between transparent and private cryptocurrencies. As a result, the next logical move would be the integration of Zano's confidential assets technology in the Bitcoin.com wallet. This would facilitate users in making their popular, favorite cryptocurrencies like ETH, BTC, and SOL completely private by bridging them onto the Zano blockchain, all whilst operating only within the Bitcoin.com wallet app.

Bitcoin isn't private, but it can be.

Bitcoin.com CEO Corbin Fraser emphasized the importance of financial privacy, stating, “Financial transactions are deeply personal, and in a world where financial surveillance is increasing, privacy should not be optional—it should be standard. Without privacy, individuals are vulnerable to exploitation, censorship, and undue financial control. The integration of Zano into the [Bitcoin.com Wallet app](#) represents a significant step toward

making privacy mainstream, ensuring that anyone, regardless of technical expertise, can use crypto freely and securely.”

Find out what Bitcoin.com has to say about the integration [here](#).
