We're excited to announce that Zano has been integrated with **Edge Wallet**, one of the most trusted and user-friendly multi-asset wallets in the crypto space. With its strong focus on privacy, security, and ease of use, Edge Wallet is a natural fit for the Zano ecosystem as we share the same values and vision.

About Edge Wallet

Edge Wallet is a secure, user-friendly, non-custodial cryptocurrency wallet designed for both beginners and experienced users. With millions of users and downloads, it stands as one of the most prominent privacy-focused wallets available today. It supports a wide range of cryptocurrencies, including Bitcoin, Monero, Ethereum, and many ERC-20 tokens, allowing users to manage multiple assets in one place.

Edge offers in-app buying, selling, and exchanging of cryptocurrencies, with features like client-side encryption, biometric login, and their latest innovative [Duress Mode feature](#), which allows you to discreetly log into a decoy account by setting up a Duress PIN. Edge is available on iOS and Android platforms.

Other Key Features of Edge Wallet:

- Your login credentials are private and invisible to Edge (not even they can see them!)

- Your keys are encrypted and locally stored on your device.

- You control access, recovery, and backups at all times.

- Built-in support for swapping between multiple cryptocurrencies.
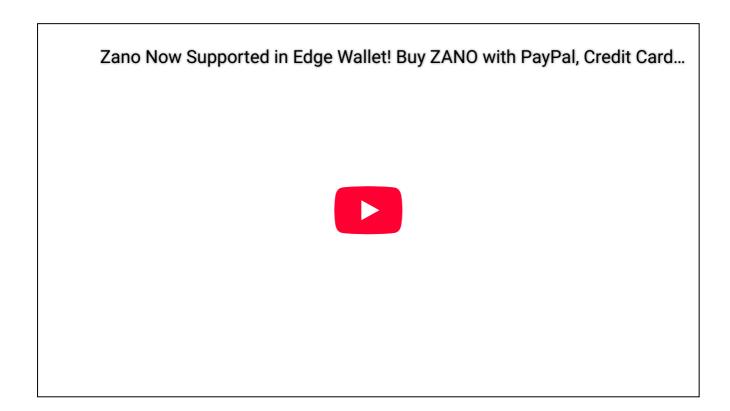

What Zano Features Does Edge Support?

Edge Wallet supports native $ZANO and Confidential Assets, allowing you to securely store and manage any asset launched within the Zano ecosystem, such as [Freedom Dollar](#) and the upcoming private versions of BTC and ETH via [Confidential Layer](#).

While Edge doesn't currently support alias registration, you can easily import your existing Zano wallet using your seed phrase. If your wallet already has an alias, you'll be able to receive any Zano-based asset directly to your alias on Edge, securely and seamlessly.

How to Use Zano in Edge Wallet

Our friends from [ZanoList](#) have made a great video on how to use Zano on Edge Wallet, which you can find below.

Final Thoughts

This integration brings Zano to one of the most respected and widely used privacy wallets, boasting adoption and providing our users with yet another compelling option to safely store their Zano assets. We're proud to collaborate with the Edge team and will continue working together to bring powerful, privacy-first tools to our community.

Stay tuned — and happy (private) transacting!
