Zano Is Coming to Unstoppable Wallet

Quinten van Welzen

Apr 30, 2026 · 2 min read

We're excited to announce that Zano is coming to [Unstoppable Wallet](#), one of the most feature-rich and privacy-respecting multi-asset wallets in the space. With its open-source foundation, zero-data-collection policy, and deep commitment to self-custody, Unstoppable Wallet is a natural fit for the Zano ecosystem. We share the same values, and this integration reflects that.

About Unstoppable Wallet

Unstoppable Wallet is a non-custodial, open-source cryptocurrency wallet built for both beginners and experienced users. It supports thousands of assets across multiple blockchains, giving users a single, intuitive interface to manage their entire crypto portfolio.

What sets Unstoppable apart from many wallets is how seriously it takes both privacy and security. No accounts. No user data collected. No custodians. Your keys, your coins.

Key Features of Unstoppable Wallet:

- Fully non-custodial: your private keys are encrypted and stored locally on your device.
- Open-source and independently audited, with an active bug bounty program on Immunefi.
- Built-in integrations for anonymous swaps across multiple blockchains.
- TOR support to protect your network-level privacy.
- Duress Mode, which lets you open a decoy wallet under coercion, keeping your real funds safe.
- Phishing protection against address poisoning attacks.
- WalletConnect support for interacting with DeFi apps.
- On-chain and market analytics for over 5,000 assets.

What Zano Features Are Supported at Launch?

The initial release is live on iOS. Here's what's supported from day one:

- Send and receive \$ZANO.
- Full transaction history.
- Wallet restore via BIP39 seed phrase.
- Support for fUSD as a Confidential Asset.
- Multi-asset swapping via Unstoppable's built-in DEX integrations, meaning you can swap directly between \$ZANO and other cryptocurrencies like BTC, ETH, and more, all from within the app.

One thing worth knowing: your Unstoppable Wallet address can already receive any Confidential Asset, but assets other than fUSD won't be displayed in the UI in this first release.

What's Coming Later?

This first release is the foundation, not the ceiling. The Unstoppable Wallet team has committed to making their Zano integration the most feature-rich Zano wallet available. Here's what users can look forward to down the road:

- Android support, coming in the months ahead.
- Support for more Confidential Assets beyond fUSD.
- Zano alias support.
- Built-in DEX support is ready for when Zano integrates with DEXes like THORChain after Gateway Addresses are live on mainnet.

Final Thoughts

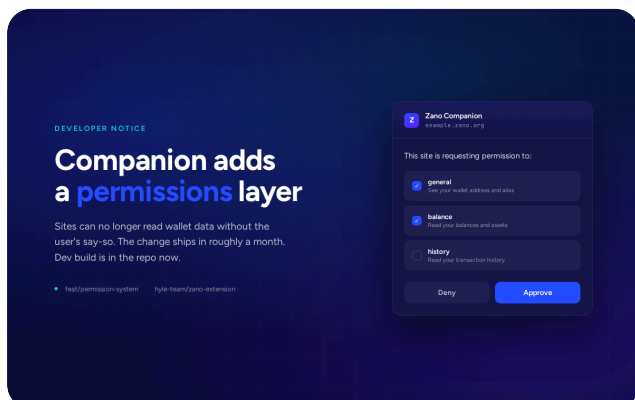

This integration brings Zano to a wallet that takes privacy seriously and has the technical depth to back it up. We're proud to be part of the Unstoppable ecosystem and excited to see the integration grow over time.

If you're on iOS, you can try it out today. Android users, you won't have to wait long. Stay tuned, and happy (private) transacting!
